

# NATO Allied Command Transformation

## Trident Juncture 2018 (TRJE18)

### Fact Sheet – Medical Civil-Military Interface

**TRJE18 Mission:**

TRJE18 provides an environment for existing or new capabilities to be tested, refined, and further developed. By coordinating and integrating experiments from NATO entities and Nations into TRJE18, we seek to allow the best experimental results without placing exercise objectives at risk. Allied Command Transformation Operational Experimentation has assigned a TRJE18 Venue Coordinator since the number of TRJE18 experiments now exceeds 20 activities, ranging from discovery to validation.

**Experiment Description:**

Headquarters Supreme Allied Command Transformation Command and Control Deployability Sustainment Medical Branch will conduct a discovery experiment in Exercise TRJE18 to identify the Medical Civil-Military Interface requirements and information flow necessary to develop a shared awareness and improve crisis response and begin exploration of the interaction between medical civilian and military components.

The Medical Civil-Military Interface identifies types of information to be shared and possible communication requirements needed to help ensure proper preparation and response to medical-related incidents during NATO military missions. The experiment involves activities such as host nation Civilian Medical Support, Collaborative Resilience, Biological Outbreaks, and unique Military Treatment capabilities. The scenario will offer opportunities for activities to help establish procedures and policies for information flow management within the community of interest.

The aim of this experiment is to identify the Medical Civil-Military Interface requirements and information flow necessary to develop a shared awareness and improve mutual responses.

**The TRJE18 Opportunity:**

TRJE18 offers a platform to practice close cooperation, coordination, interaction and liaison with host nation and civil authorities and test the deployment of NATO Military Forces in situations where the Host Nation environment is challenging, including within the context of the Comprehensive Approach. It also offers the ability to support and test the medical transformational activities of bio-responsiveness, modularity, and civilian-military interactions through the creation of medical incident and Live Exercise casualty play.

**Categories:**

Live Exercise, Computer Assisted Exercise/Command Post Exercise

**Milestone:**

May 2018 – Site Survey

Jun 2018 – Decision on participating in the Live Exercise Event

Jun/Jul 2018 – Main Event List/Main Incident List Scripting + Start of Exercise Validation

Jul 2018 – TRJE18 Final Coordination Conference

25 Oct – 7 Nov 2018 – Live Exercise Execution

14 – 23 Nov 2018 – Computer Assisted Exercise/Command Post Exercise Execution  
Post TRJE18 Experiment - Data, information and analysis to refine Concept Development
